

(a) ClosureGraph-InSAR reconstruction architecture

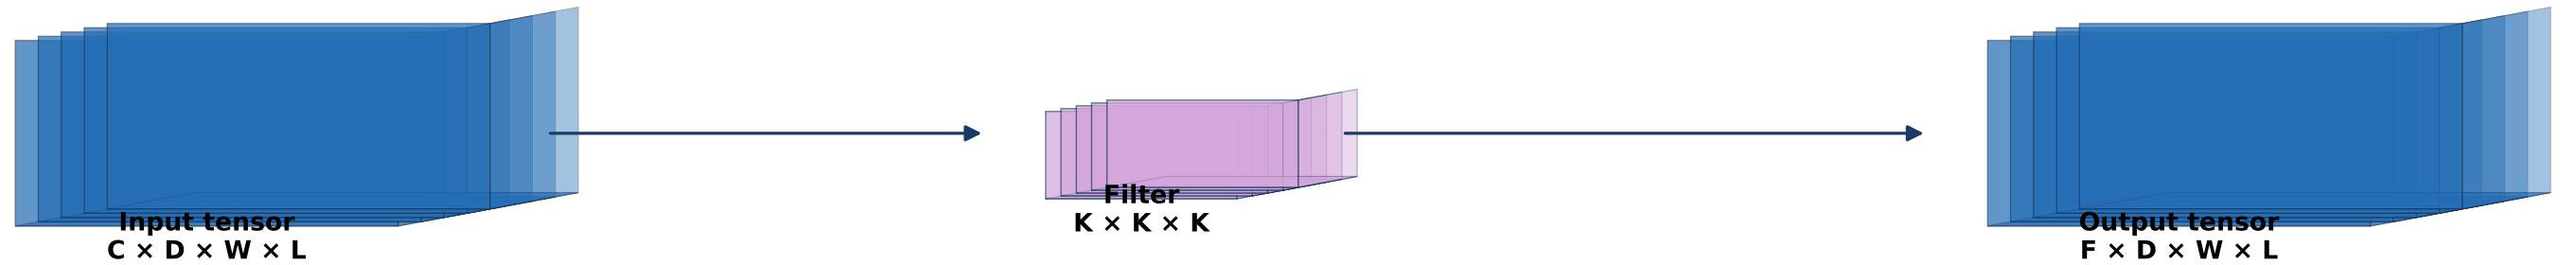

Five-level separable 3D U-Net with aligned skip connections

Spatial depthwise $1 \times 3 \times 3 \rightarrow$ temporal pointwise $3 \times 1 \times 1$ • BatchNorm + PReLU • matched baseline omits graph refinement

(b) Original 3D convolution operation

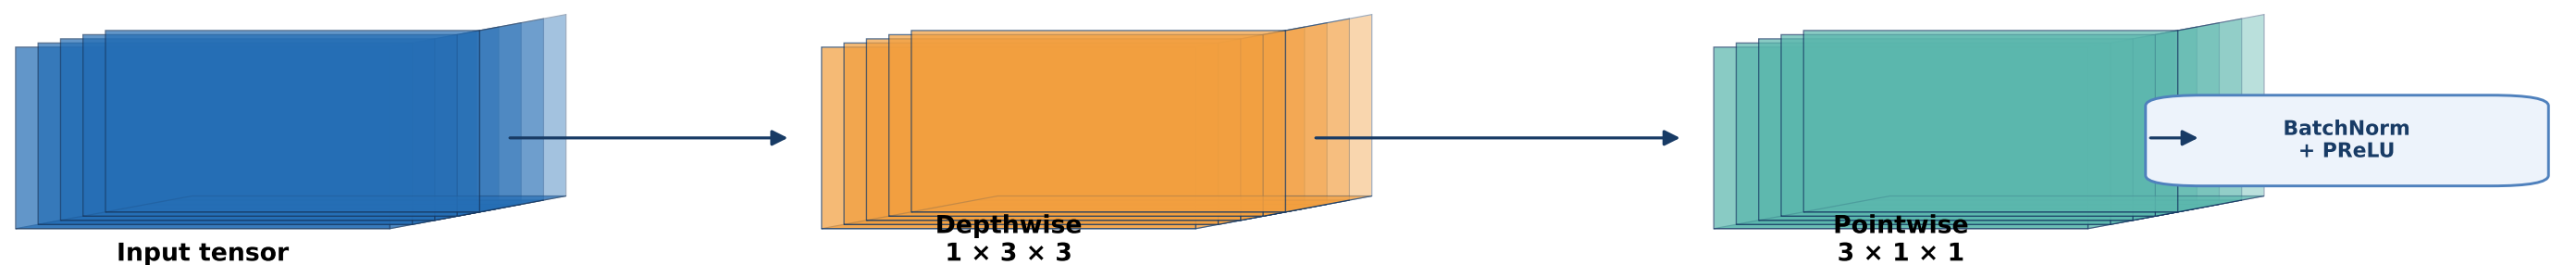

Original 3D convolution

A full 3D kernel jointly learns spatial and temporal context.

(c) Separable 3D convolution used in ClosureGraph-InSAR

Spatial depthwise convolution followed by temporal pointwise convolution

This factorisation separates spatial filtering from temporal mixing.
